About Kentway

Kentway, with an office in Hong Kong and production facilities located in Dongguan, China, has been a manufacturer of polyester nonwovens (chemical / thermal bonded, needlepunch, quilted and fiberfill) since 1979.

Our production experience combined with a focus on product quality and service has been our key success factors in delivering superior customer satisfaction, making us one of the most reliable suppliers in Southern China.

Mission Statement and Values

We believe a company should have a clear set of values in order to guide its people to achieve its mission. Our success has been built on the following:

Mission Statement

To become a leading supplier of polyester nonwovens in China by excelling in product development, quality and customer service.

Values

- Profit is important, but do not let profit get into the way of doing the right thing for the customers;
- Deal with customers fairly and build great relationships. Do not try to maximize short-term profits at the expense of building enduring relationships;
- Respect and treat customers in ways we want to be respected and treated;
- Question the old ways constantly to find better ways in doing things, making it easier to do business with us;
- When dealing with problems, focus on how to make things work instead of how things wouldn't work;
- Never stop learning; and
- Listen to the customers, understand their successes and challenges.

Company Strengths

Experience

Established in 1979, Kentway is a true pioneer in the industry and has a long history of operating in China with a track record of success that won us the trust and solid reputation from our customers.

Our in-depth experience in production management and techniques combined with our drive to continually improve has proven to be invaluable in understanding customers' needs and solving their problems.

Product Development

Polyester nonwovens have traditionally been used in garment and furniture manufacturing. However, the advancement in technologies and products has made polyester nonwovens increasingly popular as substitutes for many other materials due to their lower cost of production and superior features.

This expansion into other industries is now playing a vital role for Kentway's R&D efforts. The product knowledge and expertise we acquire from new customers have helped us in developing new products and solving new problems, making us more adaptive to the changing needs of our customers.

Like our customers, we care about the products we make. To protect our customers' interests, our products go through and pass stringent testing by internationally recognized labs for their intended features and harmful substances.

Customer Service

In addition to product quality, we understand that service is also a major priority to our customers. In order to improve on our service, we have taken a number of self-assessment initiatives to measure our performance.

Our accomplishments in 2005 include:

- Defect-free shipment: 99.92%
- On-time delivery: 100%

Production Capabilities

With an increasing demand to shorten lead time due to a highly competitive environment, we have managed our production facilities and processes to increase daily output capacity to 6,500kg, approximately 50,000 yards

In 2005, 90% of our shipments were delivered within 3 days after order confirmation. This has significantly helped our customers in production planning and reducing their inventory costs.

Service Area

Situated in Dongguan of the Pearl River Delta in China, our production facility is strategically located to serve our customers from many industries in Southern China. In addition, Dongguan also offers a great transportation system, effectively linking us to customers from far and near.

Main Products & Services

Kentway has been a manufacturer of polyester nonwovens since 1979. The production experience and expertise in materials we accumulated have allowed us to produce a wide variety of products for various industrial applications.

Depending on your requirements, Kentway will apply a combination of production methods and materials to manufacture a product suitable for you.

Kentway's products are tested by internationally recognized labs for intended product properties and harmful substances.

Chemical / Thermal Bonded Batting

Chemical / thermal bonded batting is a nonwoven fabric made with polyester fibers arranged into layers and bonded by binding agents and/or thermal means.

A good quality batting requires an even distribution of fiber to achieve consistent thickness and weight across the fabric. At Kentway, we pride ourselves in our ability and dedication in producing the most consistent product for our customers.

Considering the different types of fibers, bonding materials and production methods, the numbers of different products with varying attributes are unlimited. Some of these attributes that define the final product include: fabric strength, softness, density, loft, thickness, water affinity, fire retardant, ability to wash/dry clean, surface texture, color, etc.

Kentway's main chemical / thermal bonded battings:

NFS(W) Series – Fire Retardant Silk-like Batting

Main Product Features:

- | | |
|---------------------------------------|-------------------------------|
| ▪ Silk-like softness and comfort | ▪ Fire retardant |
| ▪ Wash/dry cleanable, machine dryable | ▪ Superior thermal insulation |
| ▪ Does not contain harmful substances | ▪ High fabric strength |

Kentway's latest innovative products developed by in-house R&D, NFS(W) combines some of the most popular polyester batting features by utilizing a unique fiber blend and proprietary production method.

In addition to offering exceptional softness found in high-grade battings, NFS(W) products also pass tests from internationally recognized labs for its ability to retard fire and maintain product quality after repeated wash/dry cleaning.

NFS(W) is ideal for high-end apparel, home décor and other manufacturers where softness, loft, ability to wash/dry clean and fire retardant are essential.

FCS Series – Down-like Batting

Main Product Features:

- | | |
|--|---|
| <ul style="list-style-type: none">▪ Down-like softness and comfort▪ Wash/dry cleanable, machine dryable▪ Hypoallergenic and hygienic | <ul style="list-style-type: none">▪ Lightweight▪ Exceptional thermal insulation▪ Cost-effective |
|--|---|

Similar to down, Kentway's FCS Series is puffy and soft to the touch with exceptional thermal insulation performance. Furthermore, it is easy to care and does not cause allergies and have hygienic concerns like down, making it a cost-effective alternative.

FCS Series is ideal for outdoor, bedding and other products that require down-like functionalities but also the advantages of a synthetic product.

HSF Series – Traditional Soft Batting

Although the HSF Series does not offer high performance features like the NFS(W) and FCS series, it is a very cost-effective product providing many standard features of polyester battings.

The HSF Series is ideal for customers requiring cost-effective and good quality polyester battings for their products to compete in price-sensitive markets.

NF Series – Fire Retardant Batting

While the NF Series mainly focuses on its ability to retard fire as required in an increasing number of home furnishing and apparel products, it still provides a wide degree of flexibility in areas such as density, loft and softness to suit your needs.

Kentway's NF series is ideal for bedding, audio speakers, infant products and other manufacturers who need to meet fire retardant standards or add functionalities to their products.

DHP Series – Polyester Foam Batting

Unlike traditional polyurethane foam, Kentway's DHP Series will not turn yellow and mildew over time. Furthermore, it is also hypoallergenic and free from harmful substances – a perfect alternative for your products.

DHP Series is ideal for baby crib bumpers, upholstery and other products where polyurethane foams are traditionally used.

Needlepunch Batting

Needlepunch batting is a special kind of nonwoven polyester batting bonded by mechanical means and, if required, binding agents for a special finishing.

Needlepunch battings are easy-to-handle, drape well and have strong fabric strength due to its high density and thin nature, making them ideal for brasserie and garment manufacturing.

Kentway manufactures a number of different needlepunch batting varying in weight, finishing and touch depending on your needs. They can be applied in apparel, footwear, furniture and a wide range of other products.

Quilting

In addition to producing nonwoven polyester battings, Kentway also provides quilting services for our customers so you can easily integrate our products into your manufacturing process.

After producing the polyester batting that suits your needs, Kentway will quilt the product with a fabric and pattern of your choice.

Fiberfill and Filler

Kentway manufactures a wide variety of polyester fillings and stuffing materials based on weight, density, smoothness, softness, etc.

At Kentway, our fiberfill and pellets are manufactured with special blends of fibers and processes to create a random arrangement of fibers, thus giving you maximum filling power.

Kentway's stuffing materials can be found in apparel, furniture, toys, dolls, pillows, handbags, packaging, etc.

Custom Products

At Kentway, we understand that special finished goods require special materials to give them unique characteristics.

This is why Kentway has a strong focus on product development and we can custom design a polyester nonwoven product for your special needs if our existing product line does not fulfill your requirements.

Please contact us for more information regarding custom made products.

Product Applications

At Kentway, we believe learning and possibilities are endless. With 27 years of experience in producing polyester nonwovens for hundreds of customers, we are still building on our knowledge to apply our skills in new industries and possibilities. Some of the industrial applications for our solutions include:

Thermal Insulation

The degree of thermal insulation of a material is determined by the amount of air it can trap and its ability to reflect heat. For polyester nonwovens, the smaller the fibers used, the more effective they are in trapping air and reflecting heat.

At Kentway, we manufacture a number of polyester nonwovens varying in thermal insulating strengths to meet your specific needs from outdoor wear to protective gear. Furthermore, features such as fire retardant and ability to wash / dry clean can be added to enhance functionalities.

Filler and Padding

Kentway manufactures a variety of polyester nonwovens that can be found everywhere in our lives – from pillows, mattresses and chairs to automobiles, carpet and dolls. This wide range of application is due to the versatility of polyester fibers and the numerous features that can be incorporated during production.

As a filling and padding material, polyester fibers are resilient, durable and lightweight in addition to providing great cushioning and having a strong ability to maintain shapes. With the abundance supply of fiber types and bonding materials combining different production methods, the degree and combination of features such as softness, thickness, density, ability to wash, water affinity, etc are endless – making Kentway's polyester nonwovens applicable to all kinds of products around us.

Acoustic Insulation

Lightweight, flexible, formable and easy to install, Kentway's polyester nonwovens is an ideal acoustic insulation that offers great sound absorbing capabilities. In addition to providing noise control, Kentway's acoustic insulation solutions also save space and reduce weight, giving you more flexibility for innovative designs.

Filtration

More and more, polyester filtration solutions similar to Kentway's are becoming a preferred alternative to glass microfibers.

Although glass microfibers are highly efficient filtration materials, they are also known to be a skin irritant and have other environmental limitations. In contrast, polyester fibers have been increasingly popular due to their ability to strike a balance between penetration, dirt holding capacity, pressure drop and costs. Kentway also manufactures filtration products that can perform at high temperature environments.

Purchase Info

The following is a guideline for your reference. Please contact us for more information on how to meet your specific needs.

Lead Time

Majority of our goods are delivered within three days after order confirmation.

Delivery Terms

Free delivery within 200km of our Dongguan production facilities.

Order Size

Minimum 1,000 yards.

Payment Policy

Payment on delivery is requested for new customers.
